Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10202-2 was prepared by Technical Committee ISO/TC 68, *Banking and related financial services*, Subcommittee SC 6, *Financial transaction cards, related media and operations*.

ISO 10202 consists of the following parts, under the general title *Financial transaction cards — Security architecture of financial transaction systems using integrated circuit cards*:

- Part 1 Card life cycle
- Part 2. Transaction process
- Part 3. Cryptographic key relationships
- Part 4: Secure application modules
- Part 5: Use of algorithms
- Part 6: Cardholder verification
- Part 7. Key management
- Part 8: General principles and overview

Annexes A, B, C and D of this part of ISO 10202 are for information only.
