

INTERNATIONAL STANDARD

ISO
10207

First edition
1991-02-15

Rock drilling equipment — Rope threaded drill steel equipment for percussive drilling, nominal sizes 22 mm to 38 mm

*Matériel de forage des roches — Équipements pour forage percutant à
filetage corde, de dimension nominale 22 mm à 38 mm*

Reference number
ISO 10207:1991(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10207 was prepared by Technical Committee ISO/TC 82, *Mining*.

This International Standard, together with ISO 10208:1991, cancels and replaces ISO 1719:1974 and ISO 1920:1974, of which it constitutes a technical revision.
