

INTERNATIONAL STANDARD

ISO
10419

First edition
1993-08-01

Petroleum and natural gas industries – Drilling and production equipment – Installation, maintenance and repair of surface safety valves and underwater safety valves offshore

*Industries du pétrole et du gaz naturel – Équipement de forage et de
production – Installation, maintenance et réparation en mer des vannes de
sécurité de surface et des vannes de sécurité sous-marines*

Reference number
ISO 10419:1993(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10419 was prepared by the American Petroleum Institute (API) (as RP 14H, 3rd edition) and was adopted, under a special "fast-track procedure", by Technical Committee ISO/TC 67, *Materials and equipment for petroleum and natural gas industries*, in parallel with its approval by the ISO member bodies.
