
**Industrial tyres and rims — Rubber solid
tyres (metric series) for pneumatic tyre
rims —**

Part 2:
Load ratings

*Pneumatiques et jantes pour matériel de manutention — Bandages pleins
en caoutchouc (série millimétrique) pour jantes de pneumatiques —*

Partie 2: Capacités de charge

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10499-2 was prepared by Technical Committee ISO/TC 31, *Tyres, rims and valves*, Subcommittee SC 7, *Industrial tyres and rims*.

ISO 10499 consists of the following parts, under the general title *Industrial tyres and rims — Rubber solid tyres (metric series) for pneumatic tyre rims*:

- *Part 1: Designation, dimensions and marking*
- *Part 2: Load ratings*
