
**Corrosion of metals and alloys —
Guidelines for exposing and evaluating
metals and alloys in surface sea water**

*Corrosion des métaux et alliages — Lignes directrices pour l'exposition
et l'évaluation des métaux et alliages à la surface de l'eau de mer*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11306 was prepared by Technical Committee ISO/TC 156, *Corrosion of metals and alloys*.
