Plastics — Unplasticized poly(vinyl chloride) (PVC-U) moulding and extrusion materials —

Part 1:

Designation system and basis for
specifications

*Plastiques — Poly(chlorure de vinyle) non plastifié (PVC-U) pour moulage
et extrusion —*

Partie 1: Système de désignation et base de spécification

Reference number
ISO 1163-1 1995(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 1163-1 was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 9, *Thermoplastic materials*.

This third edition cancels and replaces the second edition (ISO 1163-1:1985), which has been technically revised. The main changes concern the code-numbers and ranges for the impact strength and modulus of elasticity in table 2.

ISO 1163 consists of the following parts, under the general title *Plastics — Unplasticized poly(vinyl chloride) (PVC-U) moulding and extrusion materials*:

- *Part 1: Designation system and basis for specifications*
- *Part 2: Preparation of test specimens and determination of properties*
