**Fibre-reinforced plastics — Moulding  
compounds and prepregs — Determination  
of resin, reinforced-fibre and mineral-filler  
content — Dissolution methods**

*Plastiques renforcés de fibre — Préimprégnés et compositions  
de moulage — Détermination des taux de résine, de fibre de renfort et  
de charge minérale — Méthodes par dissolution*

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11667 was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 13, *Composites and reinforcement fibres*.

Annex A of this International Standard is for information only.
