## **Water quality — Evaluation of the “ultimate” anaerobic biodegradability of organic compounds in digested sludge — Method by measurement of the biogas production**

*Qualité de l'eau — Évaluation de la biodégradabilité anaérobie «ultime»  
des composés organiques dans les boues de digesteurs — Méthode par  
mesurage de la production de biogaz*

Reference number  
ISO 11734:1995(E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11734 was prepared by Technical Committee ISO/TC 147, *Water quality*, Subcommittee SC 5, *Biological methods*.

Annexes A, B, C and D of this International Standard are for information only.
