
**Plastics/rubber — Polymer dispersions and
rubber latices (natural and synthetic) —
Determination of residual monomers and
other organic components by capillary-
column gas chromatography —**

Part 1:

Direct liquid injection method

*Plastiques/caoutchouc — Dispersions de polymères et latex de caoutchouc
(naturel et synthétique) — Détermination des monomères résiduels et
autres constituants organiques par chromatographie en phase gazeuse sur
colonne capillaire —*

Partie 1: Méthode d'injection liquide directe

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 13741-1 was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 9, *Thermoplastic materials*, in close collaboration with ISO/TC 45, *Rubber and rubber products*.

ISO 13741 consists of the following parts, under the general title *Plastics/rubber — Polymer dispersions and rubber latices (natural and synthetic) — Determination of residual monomers and other organic components by capillary-column gas chromatography*:

- *Part 1: Direct liquid injection method*
- *Part 2: Headspace method*
