Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 1803 was prepared by Technical Committee ISO/TC 59, *Building construction*, Subcommittee SC 4, *Dimensional tolerances and measurement*.

It cancels and replaces ISO 1803-1:1985, ISO 1803-2:1986 and ISO 4464:1980.

In this edition the expression of dimensional accuracy is built up round the concept of target size. A list of basic terms, their definitions, and a list of terms relating to dimensional variability, together with their definitions, is included.

Annexes A and B of this International Standard are for information only.
