

Measurement of water flow in closed conduits — Tracer methods — Part VI : Transit time method using non-radioactive tracers

*Mesure de débit de l'eau dans les conduites fermées — Méthodes par traceurs —
Partie VI : Méthode du temps de transit utilisant des traceurs non radioactifs*

First edition — 1977-02-15

FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 2975/VI was drawn up by Technical Committee ISO/TC 30, *Measurement of fluid flow in closed conduits*, and was circulated to the member bodies in January 1976.

It has been approved by the member bodies of the following countries :

Australia	Germany	Romania
Belgium	India	Turkey
Chile	Italy	United Kingdom
Finland	Mexico	Yugoslavia
France	Netherlands	

No member body expressed disapproval of the document.
