

INTERNATIONAL STANDARD

ISO
3127

Second edition
1994-12-01

Thermoplastics pipes — Determination of resistance to external blows — Round-the-clock method

*Tubes en matières thermoplastiques — Détermination de la résistance aux
chocs extérieurs — Méthode autour du cadran*

Reference number
ISO 3127:1994(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 3127 was prepared by Technical Committee ISO/TC 138, *Plastics pipes, fittings and valves for the transport of fluids*, Subcommittee SC 5, *General properties*.

This second edition cancels and replaces the first edition (ISO 3127:1980), which has been technically revised.

Annexes A and B of this International Standard are for information only.
