
**Aerospace — Screws, pan head, internal
offset cruciform ribbed or unribbed drive,
threaded to head, MJ threads, metallic
material, coated or uncoated, strength
classes less than or equal to 1 100 MPa —
Dimensions**

*Aéronautique et espace — Vis à tête cylindrique, à empreinte cruciforme
déportée, avec ou sans saillies antidérapantes, filetées jusqu'à proximité de
la tête, à filetage MJ, en matériau métallique, revêtues ou non revêtues, des
classes de résistance inférieures ou égales à 1 100 MPa — Dimensions*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 3202 was prepared by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Subcommittee SC 4, *Aerospace fastener systems*.

This second edition cancels and replaces the first edition (ISO 3202:1991), of which it constitutes a technical revision.
