Solid mineral fuels — Determination of chlorine — High temperature combustion method

Combustibles minéraux solides — Dosage du chlore — Méthode par combustion à haute température

Second edition — 1981-04-01

APR 22 1981

UDC 662.66 : 662.749.2 : 543.849 : 546.13

Ref. No. ISO 352-1981 (E)

Descriptors : coal, chemical analysis, chlorine, volumetric analysis, determination of content, combustion.

Price based on 4 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 352 was developed by Technical Committee ISO/TC 27, *Solid mineral fuels*.

This second edition was submitted directly to the ISO Council, in accordance with clause 5.10.1 of part 1 of the Directives for the technical work of ISO. It cancels and replaces the first edition (i.e. ISO 352-1975), which had been approved by the member bodies of the following countries :

Austria	Israel	Romania
Belgium	Italy	South Africa, Rep. of
Chile	Japan	Spain
Czechoslovakia	Mexico	United Kingdom
Denmark	Netherlands	USSR
Germany, F. R.	New Zealand	Yugoslavia
Greece	Poland	
India	Portugal	

The member body of the following country had expressed disapproval of the document on technical grounds :

France
