Liquid flow measurement in open channels — Functional requirements and characteristics of suspended sediment load samplers

Mesure de débit des liquides dans les canaux découverts — Spécifications de fonctionnement et caractéristiques des appareils d'échantillonnage pour la détermination des charges sédimentaires en suspension

First edition — 1977-06-15

UDC 627.13 : 556.536 : 532.5.07

Ref. No. ISO 3716-1977 (E)

Descriptors: liquid flow, open channel flow, flow measurement, samplers, sediments, suspended matter, specifications, classification, performance evaluation.

FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 3716 was developed by Technical Committee ISO/TC 113, *Measurement of liquid flow in open channels*, and was circulated to the member bodies in May 1975.

It has been approved by the member bodies of the following countries :

Austria	India	South Africa, Rep. of
Belgium	Ireland	Switzerland
Canada	Italy	Turkey
Czechoslovakia	Japan	United Kingdom
France	Norway	U.S.A.
Germany	Romania	U.S.S.R.

No member body expressed disapproval of the document.
