

INTERNATIONAL STANDARD

ISO
4600

Second edition
1992-08-15

Plastics — Determination of environmental stress cracking (ESC) — Ball or pin impression method

*Plastiques — Détermination de la fissuration sous contrainte dans un
environnement donné (ESC) — Méthode par enfoncement de billes ou
de goupilles*

Reference number
ISO 4600:1992(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 4600 was prepared by Technical Committee ISO/TC 61, *Plastics*, Sub-Committee SC 6, *Ageing, chemical and environmental resistance*.

This second edition cancels and replaces the first edition (ISO 4600:1981), of which it constitutes a technical revision.
