● Iron ores — Determination of silicon content — Reduced molybdosilicate spectrophotometric method

Minerais de fer — Dosage du silicium — Méthode spectrophotométrique au molybdosilicate réduit

First edition — 1980-02-01

UDC 553.31 : 543.42 : 546.28

Ref. No. ISO 4686-1980 (E)

Descriptors : iron ores, chemical analysis, determination of content, silicon, spectrophotometric analysis, test results.

Price based on 6 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4686 was developed by Technical Committee ISO/TC 102, *Iron ores*, and was circulated to the member bodies in June 1978.

It has been approved by the member bodies of the following countries :

Australia	India	Romania
Austria	Iran	South Africa, Rep. of
Bulgaria	Italy	Sweden
Canada	Japan	Turkey
Chile	Korea, Dem. P. Rep. of	United Kingdom
Czechoslovakia	Mexico	USA
Egypt, Arab Rep. of	Netherlands	USSR
France	New Zealand	
Germany, F. R.	Poland	

No member body expressed disapproval of the document.
