Hardmetals — Determination of contents of metallic elements by X-ray fluorescence — Solution method

Métaux-durs — Dosage des éléments métalliques par fluorescence de rayons X — Méthode par solution

First edition — 1978-06-15

UDC 621.762 : 661.665.2 : 546.3 : 543.422.8

Ref. No. ISO 4883-1978 (E)

Descriptors : hardmetals, carbides, chemical analysis, determination of content, metals, cobalt, iron, manganese, molybdenum, nickel, niobium, tantalum, titanium, tungsten, vanadium, zirconium, spectrophotometric analysis, X-ray fluorescence spectrometry

Price based on 2 pages

FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4883 was developed by Technical Committee ISO/TC 119, *Powder metallurgical materials and products*, and was circulated to the member bodies in December 1977.

It has been approved by the member bodies of the following countries :

Australia	Germany	South Africa, Rep. of
Austria	Ireland	Spain
Bulgaria	Italy	Sweden
Canada	Japan	Turkey
Chile	Korea, Rep. of	United Kingdom
Czechoslovakia	Mexico	U.S.A
Egypt, Arab Rep. of	Poland	U.S.S.R
France	Romania	

No member body expressed disapproval of the document.
