Copper alloys — Determination of chromium content — Titrimetric method

Alliages de cuivre — Dosage du chrome — Méthode titrimétrique

First edition — 1984-05-15

UDC 669.35 : 543.24 : 546.76

Ref. No. ISO 6437-1984 (E)

Descriptors : copper, copper alloys, chemical analysis, determination of content, chromium, volumetric analysis.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 6437 was developed by Technical Committee ISO/TC 26, *Copper and copper alloys*, and was circulated to the member bodies in April 1982.

It has been approved by the member bodies of the following countries:

Australia	France	Poland
Belgium	Germany, F.R.	Romania
Brazil	Hungary	South Africa, Rep. of
Canada	Iran	Spain
Czechoslovakia	Italy	Sweden
China	Japan	Switzerland
Egypt, Arab Rep. of	Netherlands	Turkey
Finland	Norway	USSR

The member body of the following country expressed disapproval of the document on technical grounds:

USA
