Animal and vegetable fats and oils — Determination of composition of the sterol fraction — Method using gas chromatography

*Corps gras d'origines animale et végétale — Détermination de la
composition de la fraction stérolique — Méthode par chromatographie
en phase gazeuse*

Reference number
ISO 6799:1991(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 6799 was prepared by Technical Committee ISO/TC 34, *Agricultural food products*, Sub-Committee SC 11, *Animal and vegetable fats and oils*.

This second edition cancels and replaces the first edition (ISO 6799:1983), of which it constitutes a technical revision.

Annex A of this International Standard is for information only.
