Glass — Resistance to attack by a boiling aqueous solution of mixed alkali — Method of test and classification

*Verre — Résistance à l'attaque par une solution aqueuse bouillante d'un
mélange alcalin — Méthode d'essai et classification*

Reference number
ISO 695:1991(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 695 was prepared by Technical Committee ISO/TC 48, *Laboratory glassware and related apparatus*.

This third edition cancels and replaces the second edition (ISO 695:1984), of which it constitutes a technical revision.
