Unplasticized polyvinyl chloride (PVC-U) pipes for drinking water supply — Extractability of cadmium and mercury occurring as impurities

Tubes en polychlorure de vinyle non plastifié (PVC-U) pour l'alimentation en eau potable — Extractibilité du cadmium et du mercure au titre des impuretés

First edition — 1986-07-15

UDC 621.643.2 : 678.743.22 : 628.1

Ref. No. ISO 6992-1986 (E)

Descriptors : water supply, unplasticized polyvinyl chloride, plastics products, plastic tubes, water pipes, specifications, tests, determination of content, cadmium, mercury, extraction methods.

Price based on 3 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 6992 was prepared by Technical Committee ISO/TC 138, *Plastics pipes, fittings and valves for the transport of fluids*.

Users should note that all International Standards undergo revision from time to time and that any reference made herein to any other International Standard implies its latest edition, unless otherwise stated.
