Ref. No. ISO 7119-1981 (E)

Descriptors : handling equipment, continuous handling, conveyors, screw conveyors, computation, power.

Price based on 4 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 7119 was developed by Technical Committee ISO/TC 101, *Continuous mechanical handling equipment*, and was circulated to the member bodies in May 1980.

It has been approved by the member bodies of the following countries :

Australia	France	Poland
Belgium	India	Romania
Chile	Ireland	Sweden
Czechoslovakia	Netherlands	United Kingdom
Finland	Norway	USSR

The member bodies of the following countries expressed disapproval of the document on technical grounds :

Austria
Germany, F. R.

This International Standard is based on the work carried out by "Section II — Continuous handling" of the European Mechanical Handling Confederation (FEM).
