
**Oxygen monitors for monitoring patient
breathing mixtures — Safety requirements**

*Analyseurs d'oxygène pour le contrôle des mélanges gazeux respirés par le
patient — Exigences de sécurité*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75% of the member bodies casting a vote.

International Standard ISO 7767 was prepared by Technical Committee ISO/TC 121, *Anaesthetic and respiratory equipment*, Subcommittee 3, *Lung ventilators and related equipment*.

This second edition cancels and replaces the first edition (ISO 7767:1988), which has been technically revised.

Annex N forms an integral part of this International Standard. Annexes O and P are for information only.
