

INTERNATIONAL STANDARD

ISO
8380

Second edition
1993-11-15

Forestry machinery — Portable brush-cutters and grass-trimmers — Cutting attachment guard strength

*Matériel forestier — Débroussailleuses et coupe-herbe portatifs —
Résistance mécanique du protecteur du dispositif de coupe*

Reference number
ISO 8380:1993(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 8380 was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Sub-Committee SC 17, *Manually portable forest machinery*.

This second edition cancels and replaces the first edition (ISO 8380:1985), which has been extended to include guards for types of blade other than circular and cutting attachment guards for brush-cutters and grass-trimmers.

Annex A of this International Standard is for information only.
