INTERNATIONAL STANDARD

ISO 9608

Second edition
1994-08-15

V-belts — Uniformity of belts — Test method for determination of centre distance variation

Courroies trapézoïdales — Uniformité des courroies — Méthode d'essai permettant de déterminer les variations d'entraxe

Reference number
ISO 9608:1994(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9608 was prepared by Technical Committee ISO/TC 41, *Pulleys and belts (including veebelts)*, Subcommittee SC 1, *Veebelts and grooved pulleys*.

This second edition cancels and replaces the first edition (ISO 9608:1988), which has been technically revised. In particular, the values for the centre distance variations in relation to the belt top width have been deleted.

Annex A of this International Standard is for information only.
